Cybersecurity is no longer a choice.

You have an obligation to ensure that you have at least basic security protocols in place and understand the importance of cybersecurity, or have somebody like ourselves at SecureYourIT to give you expert advice and help in this area. For e.g You could be implicated in a breach of someone's data, you need to know what to do.

What is cyber security?

Cybersecurity is the practice of defending computers, servers, mobile devices, electronic systems, networks, and data from malicious attacks. It's also known as information technology security or electronic information security.

For example, can you or somebody in you home or organisation answer these basic questions

- Who has access to your network?
- What is on your network? E.g. PCs, Alexa, Google services, etc.
- How is your network protected?
- Is your data backed up? how do you know? have you tested it?
- Do you have a disaster recovery plan?
- Do you have an I.T policy?
- If you arrive into work and all you I.T equipment is gone? whats the plan?

Why should you get a cyber-review form SecureyourIT?

SecureyourIT is a cybersecurity company. With over 25 years of experience supporting enterprises with the creation of full solutions and secure business concepts, backup solutions, disaster recovery, encryption, GDPR, and information technology policies. SecureyourIT's deep threat intelligence and security expertise are continually evolving into new security solutions and services to safeguard the business, websites, web servers, online applications, and I.T infrastructure all over Ireland. The company's comprehensive security portfolio includes outstanding endpoint protection as well as a variety of specialized security solutions and services to battle complex and emerging digital threats. SecureyourIT's solutions safeguard over a 20 companies, and we work with a variety of clients to secure what matters most to them.

SecureyourIT strategies and services

Every business faces its unique set of challenges, ranging from rules and regulations to extremely sophisticated data security threats. To stay up, regardless of the size of the company and one-on-one counsel from a skilled cyber security engineer is usually necessary. On the other hand, SecureyourIT offers a no-compromise solution that eliminates new hire commitments while still delivering executive-level counsel. Get access to a level of service usually reserved for larger companies. To assist you in meeting your operational objectives, we'll work with management to align security policies and procedures with business goals. Employ a large knowledge base while putting in place cyber security tactics that are tailored to your company's model and budget. Enjoy on-demand and as-needed assistance from knowledgeable advisors who can help you when you need it most. We specialize in executive advisory services, vendor evaluation, policy and technical implementation, and policy and technical implementation. We're also accessible on a one-time or continuing basis to help you deal with the plethora of security issues that arise during the year.

Why hire a SecureyourIT consultant?

1. Our consulting services are designed to help you achieve your security project goals.
2. We supply product specialists who will configure systems to reduce cyber dangers.
3. We allocate workers to focus on other objectives while we concentrate on risk management.
4. Throughout the year, we may provide on-demand, hourly, or project-based security consultancy.

We examine operations objectively, comparing your environment to those of similar businesses and scenarios. Our clients benefit from our unique vantage point's perspective in everything from security program design to audit preparedness. We can help with vendor risk management, business continuity planning, technical security controls, vulnerability management, web application security, and GDPR, HIPAA, and PCI compliance issues by combining business acumen with cyber security knowledge. We also provide penetration testing and forensic investigations, with cyber security project managers on standby to plan, choreograph, and execute significant projects while ensuring the best possible return on investment. All of this is available to our clients on an as-needed, part-time, or full-time basis. For customers for whom we supply security solutions, this decreases the risk of data breaches.

Strategy and Advisory Review

Every company eventually reaches a point when it needs a degree of understanding that it can't get from its own employees. By supplementing your current skills with the correct combination of business and cybersecurity advice, we help you better compete, innovate, and grow. Define your business's direction and objectives while allocating resources wisely to help it develop and flourish.

Your not jut protecting yourself,you protesting your clients

Our SecureyourIT services provide your business with significant monetary and non-monetary benefits. A tighter security posture keeps secret, sensitive, and private information out of the hands of unauthorised people or bots. Furthermore, good cyber security policies and practices increase staff productivity by reducing computer system downtime and enhancing uptime. Not only are you protecting your computers and hardware against viruses, but you're also prolonging the life of your equipment and deferring the cost of replacement. You will be able to acquire and keep new clients if you increase consumer confidence and do not gat a bad reputation due to a hack.

Product specific Expertise

Simple methods can only get you so far in getting your company to where it needs to be. That's why we take a tailored approach, matching management with the best firewall, intrusion prevention, SIEM, network access control (NAC) security consultants (CISCO ISE, ForeScout CounterACT), antivirus security consultants, and vulnerability scanning experts. We are familiar with the most popular security products. We know how to put them into action in a variety of situations. Our hands-on professionals concentrate on security procedures and standards that are particular to your company and business.

Security program design

Collaborate with a group of experts that can provide senior management with advice and help you create procedures that are compliant with the newest laws, industry standards, and government regulations. PCI Data Security Standards (PCI DSS), GDPR, HIPAA, EI3PA, GLBA FFIEC, NIST 800-53, and ISO 27002 are just a few of the regulations we assist clients to comply with.

How we will help you!

After agreeing the process with you, we will remotely connect(or call to you location) to a device on your network, be it a laptop or PC. We utilize Teamviewer, an enterprise business class remote software that we hold a commercial license for and are trained to use safely and securely.

We will do a risk assessment of you business I.T, providing a full report.

Please note; you are always in control. We are unable to access without your agreement and permission. Teamviewer notifies you of a connection which you will have to approve. Alongside that, you are also able to remove our access at anytime during the session. This connection is also private and confidential, and covered under GDPR. Non disclosure signing available.

Sample Network

Information we can provide

- Score your risk, you may be surprised some basic changes can seriously reduce risk.
- A full report of your current set I.T up
- Whether your password(s) match the recommended security levels.
- Spot potential errors and problems.
- Firewall setup and reviewal. This monitors and/or blocks connections in and out of your network.
- Professional advice and do the work if required.
- In the unlikely event of an issue, you will understand how to limit your exposure and get back on track.
- .Train your staff to mention a few
